

CANNABEIZEIN LEAFLET

How To Grow Summary

INDOORS: PLACE EACH SEED IN A 4" CONTAINER WITH MOIST ORGANIC POTTING SOIL. ALLOW 4-7 DAYS TO SPROUT. PLACE UNDER A 600 WATT OR 1,000 WATT MH GROW LAMP ON A 18 HOURS ON / 6 HOURS OFF VEGETATIVE GROWTH CYCLE FOR 4-6 WEEKS. SWITCH TO A HPS GROW LAMP WITH A 12 HOURS ON / 12 HOURS OFF FLOWERING GROWTH CYCLE FOR 8 WEEKS. TWO WEEKS INTO THE FLOWERING CYCLE CHECK FOR AND REMOVE ANY MALE PLANTS, VISIBLY NOTICEABLE BY THEIR POLLEN SACKS. WATER REGULARLY WITH ORGANIC FERTILIZERS. WATER WITH PLAIN WATER FOR THE LAST TWO WEEKS OF FLOWERING. WHEN THE FLOWERS ARE MATURE TRIM THEM UP AND DRY THEM FOR TWO WEEKS. THEN CURE THEM IN A GLASS JAR OR CVAULT FOR AT LEAST TWO WEEKS BEFORE ENJOYING, A THREE TO FOUR MONTH CURE IS THE BEST.

OUTDOORS: SPROUT THE SEEDS INDOORS DURING MARCH OR APRIL. PLANT OUTSIDE IN MAY OR JUNE. EARLY FLOWERING VARIETIES WILL START TO FLOWER BY THE END OF JULY AND HAVE MATURE FLOWERS BY THE END OF SEPTEMBER. LATER MATURING VARIETIES WILL START TO FLOWER DURING AUGUST AND HAVE MATURE FLOWERING SOMETIME DURING OCTOBER. BE EXTRA VIGILANT FOR AND REMOVE ANY MOLDY BUDS FOUND ON OUTDOOR PLANTS. TO HARVEST REMOVE FAN LEAVES AND HANG BRANCHES TO DRY. AFTER DRYING FOR TWO WEEKS REMOVE BUDS FROM THE STALKS AND TRIM THEM UP. THEN CURE THE BUDS FOR AT LEAST TWO WEEKS AND THEY WILL BE READY TO ENJOY!
